

ขั้นที่ 1 สร้างโปรเจค

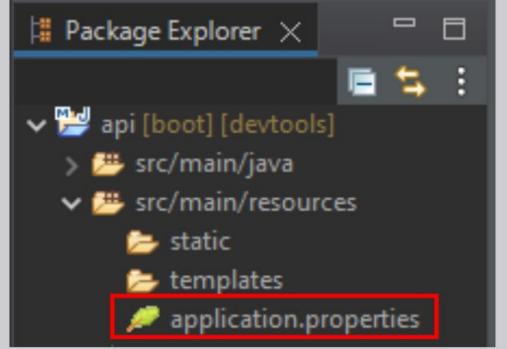

- 1 .ตั้งชื่อ
- 2.เลือก maven
- 3. ตั้งเป็น com.ชื่อ
- 4.ตาม Name
- 5.ตั๊กถูก
- 6.กด next

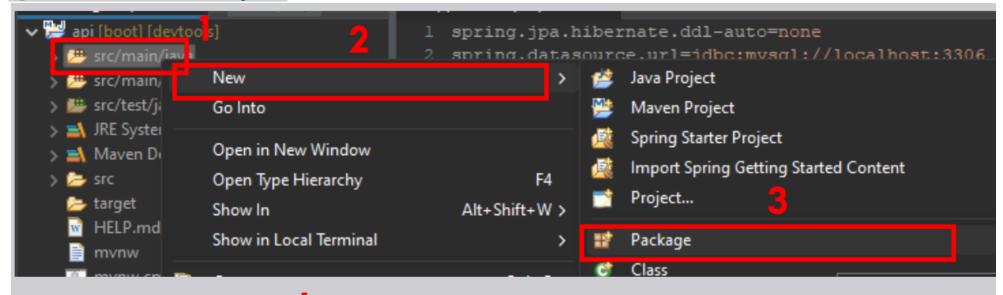

สร้างไฟล์ที่ 1 application.properties

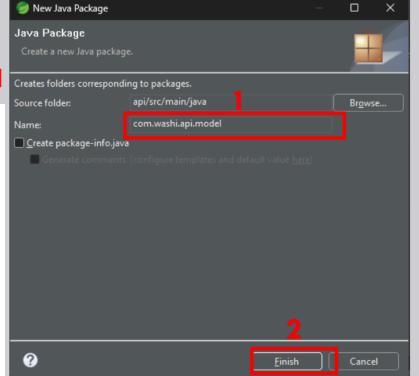

1.เข้า resource 2.double click "application.properties"

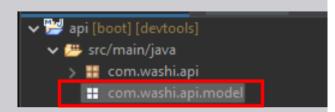

```
spring.jpa.hibernate.ddl-auto=none
spring.datasource.url=jdbc:mysql://localhost:3306/myshop
spring.datasource.username=root
spring.datasource.password=
spring.datasource.driver-class-name= com.mysql.cj.jdbc.Driver
```

spring.jpa.hibernate.ddl-auto=none spring.datasource.url=jdbc:mysql://localhost:3306/ชื่อฐานข้อมูล spring.datasource.username=root spring.datasource.password= spring.datasource.driver-class-name= com.mysql.cj.jdbc.Driver

1.คลิกขวา ที java
2.กด new
3.เลือก Packa

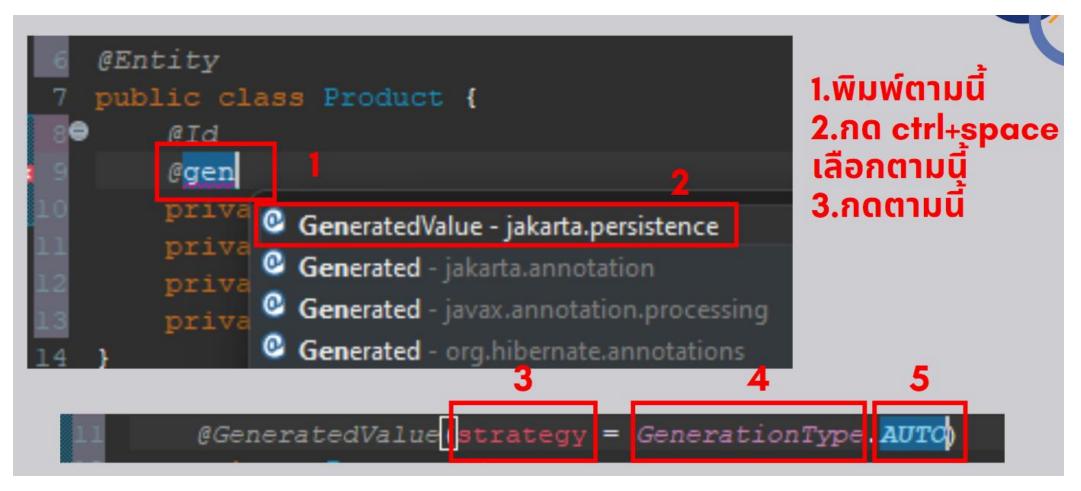

1.ตั้งเป็น com.ชื่อ.ชื่องาน.model 2.กด finish

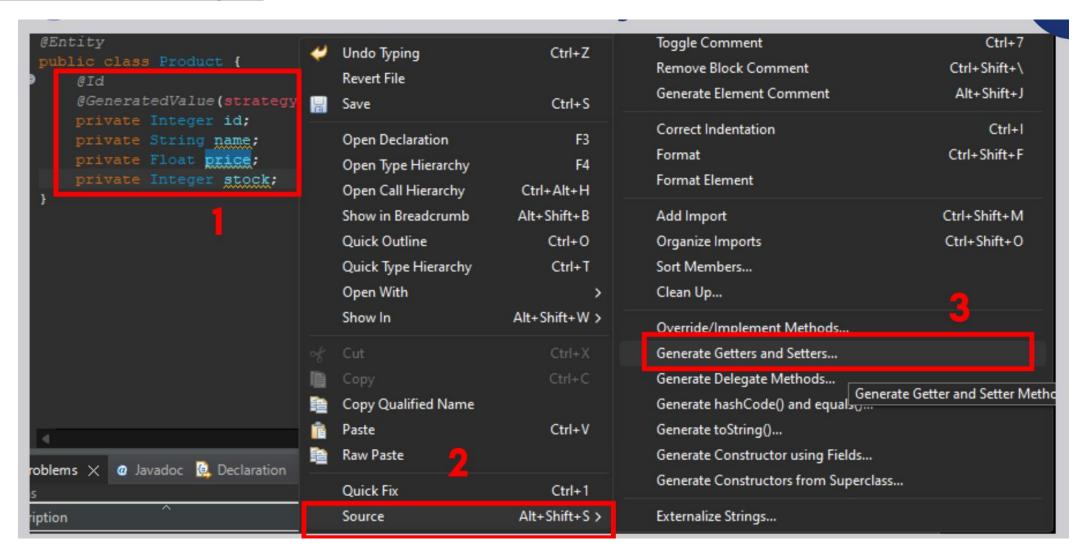

```
package com.washi.api.model;
        @enti
               Entity - jakarta.persistence
                EntityListeners - jakarta.persistence
                   EntityScan - org.springframework.b
                                   package com.washi.api.model;
1.พิมพ์
2.กด ctrl+space เลือกตามนี้
                                   import jakarta.persistence.Entity;
3.ได้ตามรูป
                                   @Entity
                                   public class Product {
```

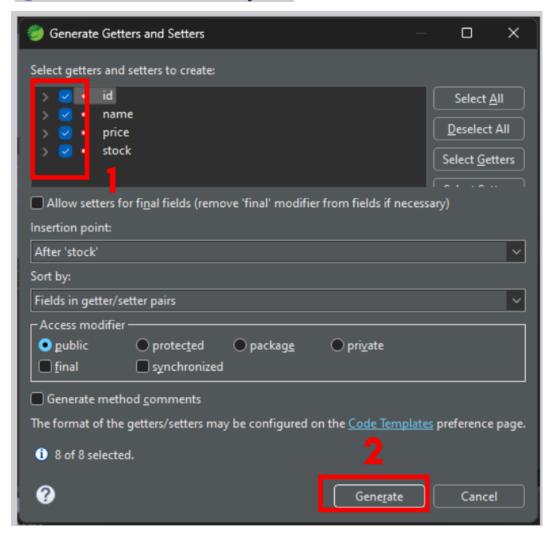

```
6 public class Product {
7
8    private Integer id;
private String name; 1
private Float price;
private Integer stock;
12 }
```

1.พิมพ์ตามนี้ 2.พิมพ์ตามนี้ 3.กด ctrl+space เลือกตามนี้

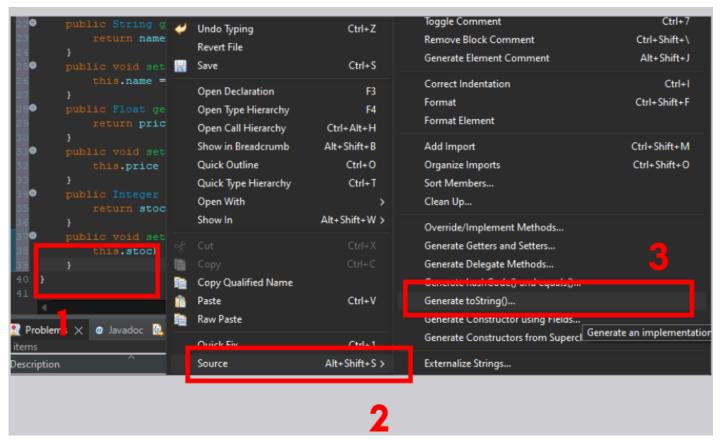

```
priv old - jakarta.persistence
priv old - jakarta.persistence
priv old - org.springframework.data.annotation
ldClass - jakarta.persistence
ldGeneratorType - org.hibernate.annotations
```

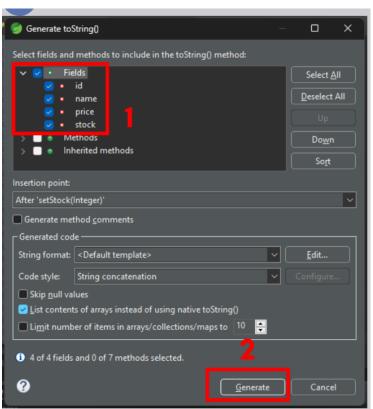

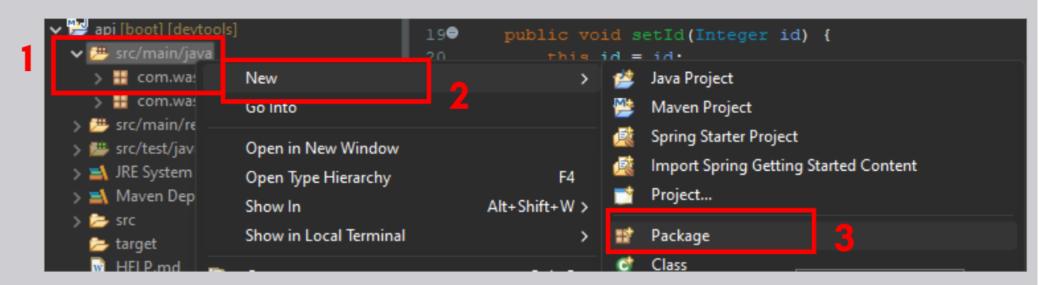

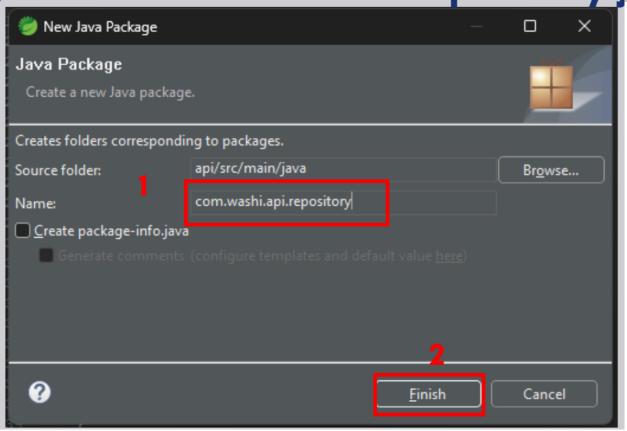

```
public Integer getId() {
    return id;
public void setId(Integer id) {
   this.id = id;
public String getName() {
    return name;
public void setName (String name) {
   this.name = name;
public Float getPrice() {
   return price;
public void setPrice (Float price) {
    this.price = price;
public Integer getStock() {
    return stock;
   this.stock = stock;
```

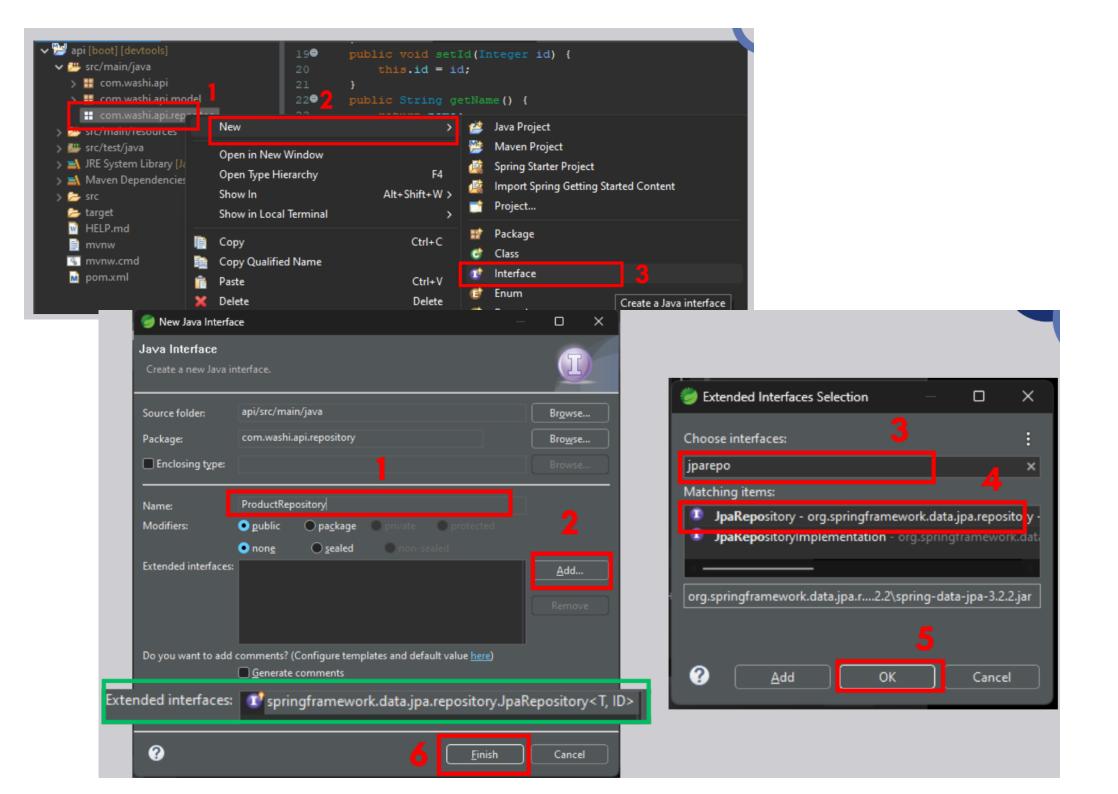

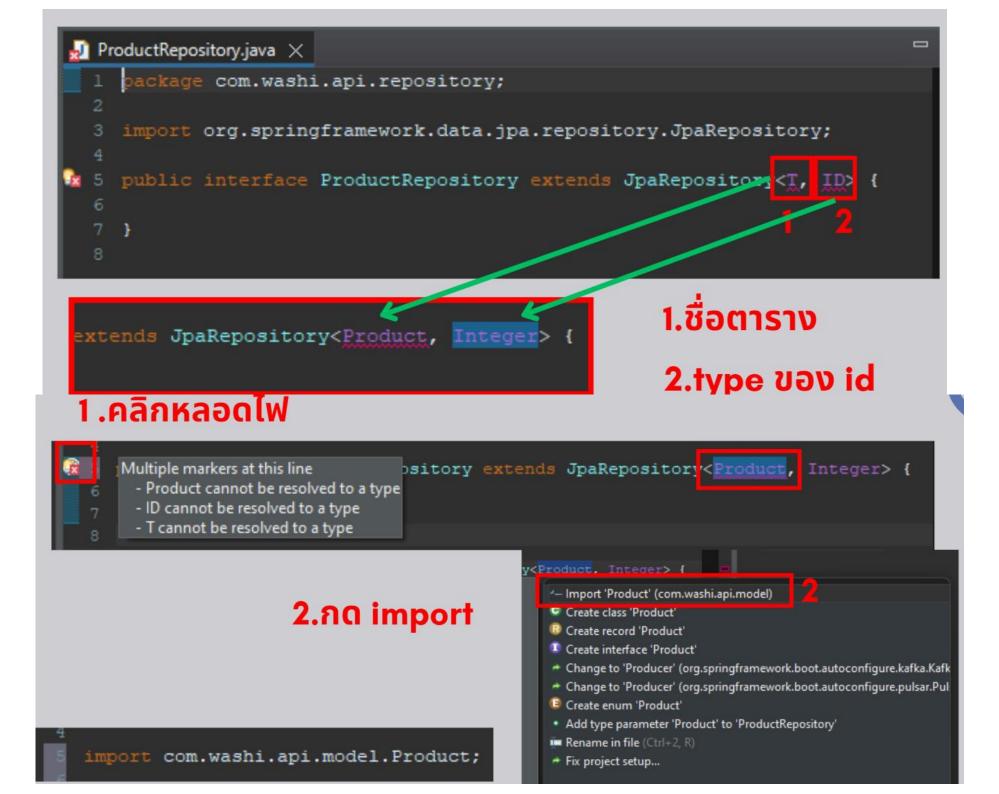

สร้างไฟล์ที่ 3 ProductRepository.java

```
1.พิมพ์ list กด ctrl+space
        public interface ProductRepository e
            list
                  lis(): void - Method stub
    10
                    List - java.util
                   2.เลือก List
                 import java.util.List;
```

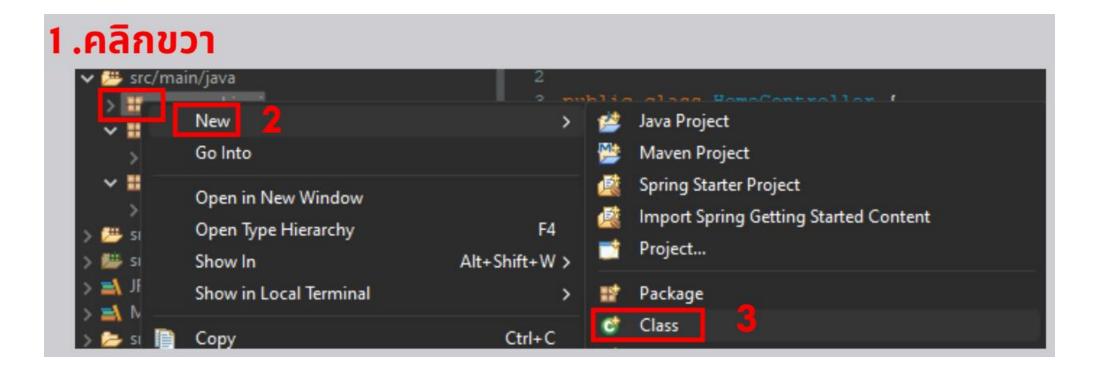

```
1. ILIABU E IÜUBORISIV

9 public interface ProductRepository extends JpaRepository (Product Integer) {
    Linter |
    Linter |
    public interface ProductRepository extends JpaRepositive |
    Lister |
    Product - com.washi.api.model
    ProductRepository - com.washi.api.repository

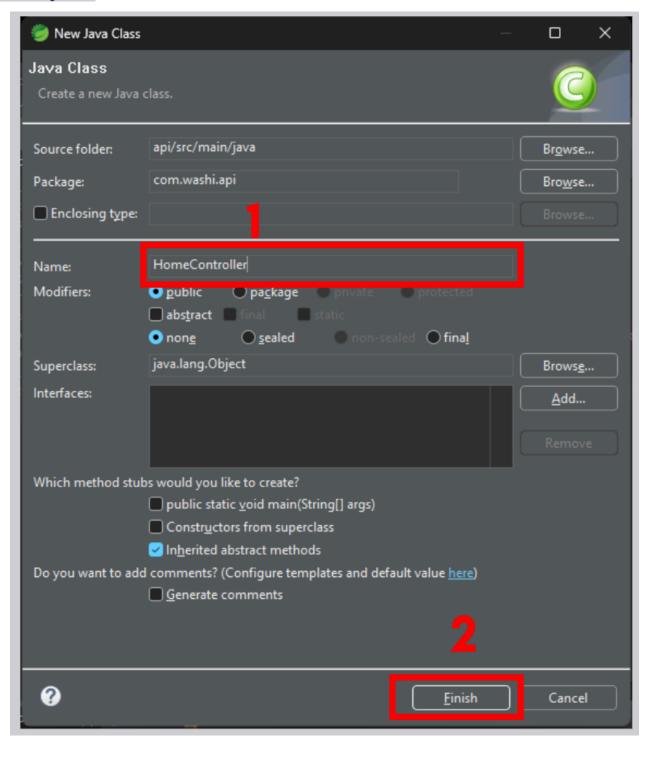

2. Iaan misiv

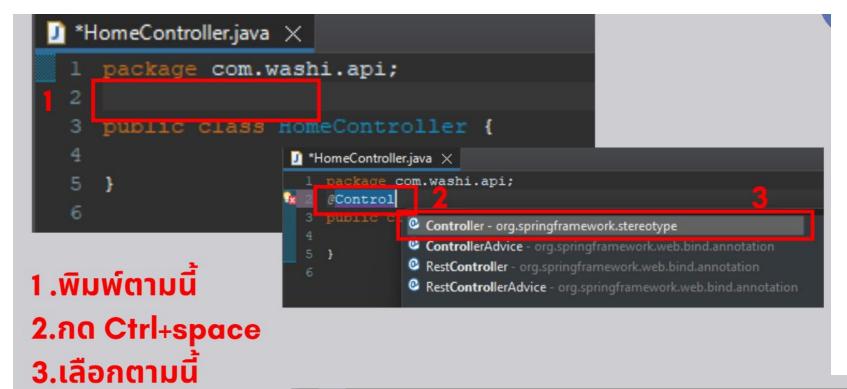

import java.util.List;
```

สร้างไฟล์ที่ 4 HomeController.java

สร้างไฟล์ที่ 4 HomeController.java

```
6 public class HomeController {
1x 7  2  @Autowired
2  private ProductRepository Prepo;
9
```

```
@Autowired

priva

Autowired - org.springframework.beans.factory.annotation
```

1.พิมพ์ตามนี้ ตามชื่อไฟล์Repo

2.กด Ctrl+space

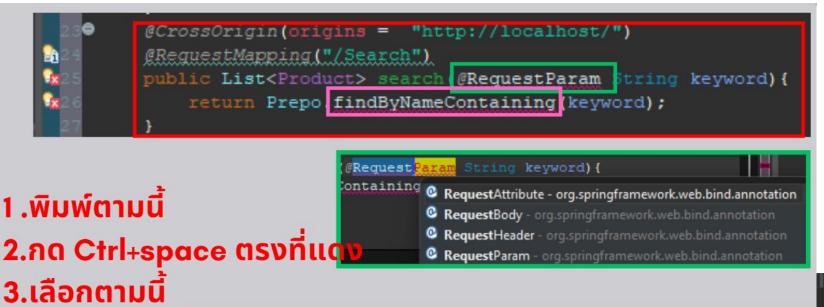

3.เลือกตามนี้

```
public class HomeController {
    @Autowired
    private ProductRepository Prepo;

    CrossOrigin(s)

T ProductRepository - com.washi.api.repository
```

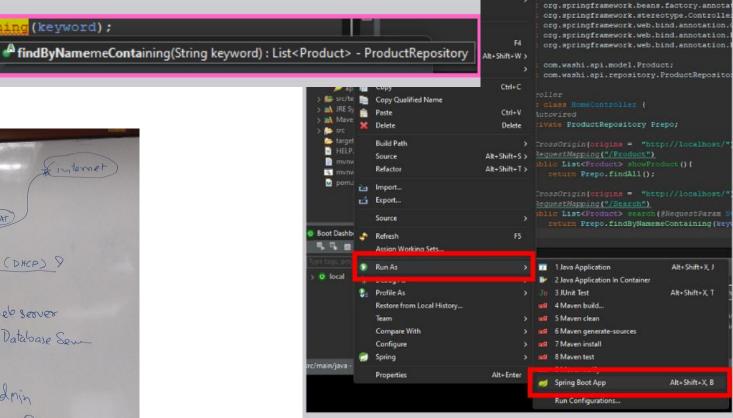

```
@CrossOrigin(origins = "http://localhost/")
                 @RequestMapping ("/Product")
                          List<Product> showSeller() {
                      return Prepo.findAll();
                                   CrossOr<mark>igin</mark>(origins = "http://localhost/")
1.พิมพ์ตามนี้
                                   RequestM C CrossOrigin - org.springframework.web.bind.annotation
2.กด Ctrl+space ตรงที่แดง
                                @RequestMapping ("/Product")
3.เลือกตามนี้
                                public List @ RequestMapping - org.springframework.web.bind.annotation
                  <Product> showSeller()
                   List - java.util
```

(keyword);

.findByNameConta

mport java.util.List;
